

PCCA Lipoderm®

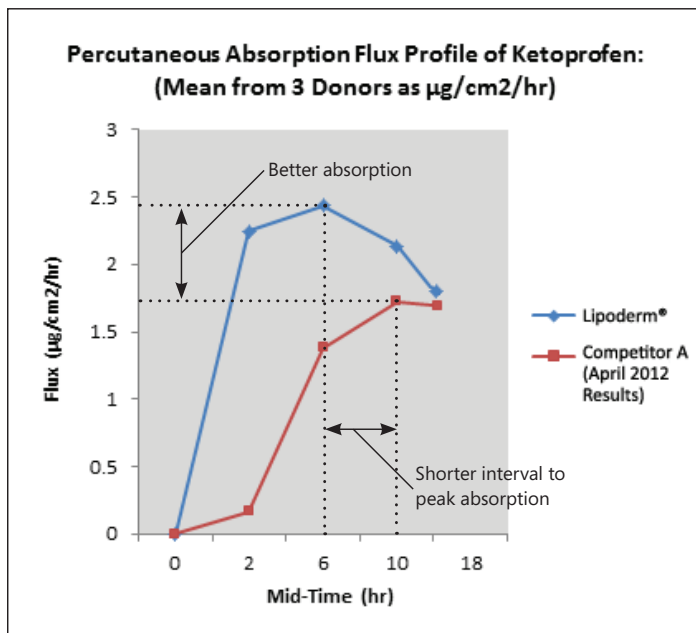

A Validated Transdermal Vehicle With Superior Results Over the Competition

PCCA # **30-3338**

500 GM, 2500 GM or 12500 GM Containers

This elegant alternative to traditional PLO gels contains a proprietary liposomal component that may increase the permeation of a variety of actives. Lipoderm can be used in place of PLO gels for transdermal compounding. Its touch and feel is smooth and creamy, unlike the tacky feel of PLOs. Many pharmacies are making the switch to Lipoderm for their transdermal needs. It is a stable system that does not separate upon refrigeration and has great resiliency in the presence of ionic substances.

Even when compared to the newest competitive studies, Lipoderm transdermal base can deliver ketoprofen more quickly and with better absorption. Not only does it deliver ketoprofen more effectively, it also delivers up to four actives simultaneously – with the studies to prove it.

For your patients, this means less waiting for their actives to be absorbed and the potential for better outcomes.

For your practice, it means differentiating yourself from the competition and standing out with your prescribers.

No other transdermal on the market has been studied more and you don't have to take just our word for it! For more information on Lipoderm and to review all four studies go to www.pccarx.com/lipoderm.
